- Check for Continuity and Voltage** Use a multimeter to verify wiring integrity based on the diagram. Confirm that signals are reaching the actuators when switches or remote commands are issued.

Diagnose Faults

If a door isn't locking, check the actuator wiring and functionality. If remote commands aren't registering, verify the receiver and control module communication. Replace faulty components as indicated by the diagram insights.

Common Troubleshooting Scenarios Using the Diagram

Scenario 1: Driver's Door Locks but Passenger Doors Do Not

Potential Cause: Wiring fault or faulty actuators in passenger doors.

Diagram Clues: Trace wiring from the control module to passenger door actuators.

Solution: Check wiring continuity, replace faulty actuators, or repair wiring.

Scenario 2: Central Locking Works via Key Fob but Not via Interior Switches

Potential Cause: Faulty switches or wiring from switches to the control module.

Diagram Clues: Follow the switch wiring paths; verify connections and switch operation.

Scenario 3: No Response from Remote or Interior Switches

Potential Cause: Control module malfunction or communication issue.

Diagram Clues: Check receiver wiring, antenna, and power supply to the control module.
