**What Is Cumulative Frequency?**

Before diving into the specifics of Edexcel Maths cumulative frequency topic papers, it's crucial to understand what cumulative frequency entails.

**Definition and Importance**

Cumulative frequency refers to the running total of frequencies up to a certain point in a data set. It helps in understanding the distribution of data and is particularly useful for constructing ogives (cumulative frequency graphs) and calculating median, quartiles, and percentiles.

**How Is Cumulative Frequency Calculated?**

To calculate cumulative frequency:

- List all class intervals or data points in order.
- For each interval, add its frequency to the sum of all previous frequencies.
- The resulting total for each class is the cumulative frequency.

**Example:**

| Class Interval | Frequency | Cumulative Frequency |
|----------------|-----------|----------------------|
| 0 - 10         | 5         | 5                    |
| 10 - 20        | 8         | 13                   |
| 20 - 30        | 12        | 25                   |
| 30 - 40        | 7         | 32                   |

5. Word Problems and Contextual Questions Applying cumulative frequency concepts to real-world situations, e.g., analyzing heights, test scores, or other measurable data.

Sample Questions from Edexcel Maths Cumulative Frequency Topic Papers

To illustrate, here are sample questions typically found in these papers:

Question 1: Given the cumulative frequency table below, estimate the median score.

| Score Range | Cumulative Frequency |
|-------------|----------------------|
| 0 - 10      | 4                    |
| 10 - 20     | 12                   |
| 20 - 30     | 20                   |
| 30 - 40     | 25                   |
| 40 - 50     | 30                   |

[Solution Tip: Calculate total data points (e.g., 30). The median is at the position  $(Total + 1)/2$ , i.e.,  $(30+1)/2=15.5$ . Find the class interval where cumulative frequency exceeds 15.5 (here, 20), which is 20 - 30.]

Question 2: Plot the cumulative frequency graph for the data provided and estimate the interquartile range.

Question 3: A survey recorded heights of 50 students. The cumulative frequency for heights less than 160 cm is 10, and for less than 170 cm is 35. Estimate the median height.

### Sample Questions and Detailed Answers from the 11 June Exam

Below, we present hypothetical sample questions similar to those from the June 11 exam, along with step-by-step solutions to illustrate how to approach and solve them effectively.

**Question 1: Algebraic Expression Simplification** Simplify the expression:  $(3(2x - 4) + 5(x + 2))$ .  
**Answer:** Expand brackets:  $(3 \times 2x = 6x)$   $(3 \times -4 = -12)$   $(5 \times x = 5x)$   $(5 \times 2 = 10)$   
 Rewrite the expression:  $[6x - 12 + 5x + 10]$   
 Combine like terms:  $[(6x + 5x) + (-12 + 10) = 11x - 2]$   
**Final answer:**  $\boxed{11x - 2}$

**Question 2: Solving a Linear Equation** Solve for  $(x)$ :  $(4x + 7 = 3x + 12)$ .  
**Answer:** Subtract  $(3x)$  from both sides:  $[4x - 3x + 7 = 12]$   
 Simplifies to:  $[x + 7 = 12]$   
 Subtract 7 from both sides:  $[x = 12 - 7]$   $[x = 5]$   
**Final answer:**  $\boxed{5}$

**Question 3: Pythagoras' Theorem in Geometry** A right-angled triangle has legs of length 6 cm and 8 cm. Find the length of the hypotenuse.  
**Answer:** Recall Pythagoras' theorem:  $[c^2 = a^2 + b^2]$   
 Calculate:  $[c^2 = 6^2 + 8^2 = 36 + 64 = 100]$   
 Find  $(c)$ :  $[c = \sqrt{100} = 10]$   
**Final answer:**  $\boxed{10 \text{ cm}}$

**Question 4: Data Interpretation and Averages** The table shows the number of books read by students in a month:

| Number of Books | Number of Students |
|-----------------|--------------------|
|-----------------|--------------------|

||-----|-----|| 0-2

|| 9-11

| 5

|| 3-5

| 12

|| 6-8

| 8

Estimate the mean number of books read per student.

Answer: Approximate the mid-point of each class: 0-2: 13-5: 46-8: 79-11: 10

Calculate the total number of books read:  $(5 \times 1) + (12 \times 4) + (8 \times 7) + (3 \times 10) = 5 + 48 + 56 + 30 = 139$

Calculate the total number of students:  $5 + 12 + 8 + 3 = 28$

Calculate the mean:  $\frac{139}{28} \approx 4.96$

Therefore, the estimated average number of books read per student is approximately 5 books.

transformations. Correctly applying formulas for area and volume. Working with units consistently. Statistics and Probability Topics Covered: Analyzing data sets: mean, median, mode, range. Drawing and interpreting histograms, bar charts, pie charts. Calculating probabilities of single and combined events. Understanding experimental and theoretical probabilities. Typical Questions: Find the average and range of a data set. Interpret data from a graph or chart. Calculate the probability of drawing a certain card from a deck. Use probability rules for independent and dependent events. Common Mistakes: Confusing mean with median. Misreading graphs and misinterpreting data. Forgetting to specify whether probabilities are expressed as fractions, decimals, or percentages. Difficulty Level and Student Performance The June 2103 paper is generally considered moderate in difficulty, but several factors influence student performance: Question Complexity: The paper balances straightforward recall questions with multi-step problem-solving. Higher marks are awarded for clarity of working and logical reasoning. Common Challenges: Time management: Students often spend too long on complex problems, risking insufficient time for others. Algebraic accuracy: Mistakes in basic manipulation can cascade into larger errors. Application of concepts: Applying learned formulas in unfamiliar contexts requires careful reading. Grade Boundaries: Historically, grade boundaries fluctuate depending on the overall performance of examinees, but a strong understanding of core topics typically scores well.
